Aprisa XE

## POINT-TO-POINT DIGITAL MICROWAVE LINKS
FCC 900 MHz licensed band

900 MHz Aprisa XE: maximizing spectrum use and making challenging long distance links possible

- **Efficient future-proof single-box architecture**: the Aprisa XE's built-in multiplexer and cross-connect eliminate external equipment and minimize the over-the-air requirements, with customer-configurable interface slots integrating all IP, voice and data traffic. Configuration, performance monitoring and diagnostics are easy with the 4RF embedded web-based element management system, SuperVisor.

- **High capacity**: class-leading spectral efficiency and up to 128 QAM modulation make the maximum use of the available spectrum, with industry leading capacity of up to 1112 kbit/s in a 200 kHz channel.

- **Long range**: a single 900 MHz Aprisa XE can link distances in excess of 120 miles, overcoming the problems of water, environmental conditions and topographical obstacles.

- **Carrier-class performance**: Aprisa XE links are engineered to achieve 'five 9s' availability, benefiting from state of the art forward error correction and inherent low latencies, for unrivaled quality of service.

- **Cost effective**: the Aprisa XE has a low total cost of ownership, providing a rapid return on investment by minimizing both capital and operational expenditure.

- **Redundancy options**: Monitored Hot Standby and Hitless Space Diversity are available for protection in mission-critical applications.

- **Reliable**: the Aprisa XE has an actual MTBF of 95.72 years, and zero out-of-the-box failures in 2008. It can be relied upon to perform in the harshest and most remote environments.
